The Application Summary screen shows the health of one application, the services it talks to, and any active problems or warnings. It is the drill-down from the Application Health Dashboard.

What you can do here

- Watch application health and performance in one screen.
- See the Service Dependency Map (SDM) with external entities, services, and adjacent applications.
- Read service health from event capsules at a glance.
- Open active problems, warnings, and capacity forecasts.
- Search, customize the layout, and review historical data.

Open the Application Summary

In the Application Health Dashboard, click any application pod to open its Application Summary.

What's on the screen

1. **External entity.** An external user or service that starts a transaction in the application.
2. **Entry-point service.** The service that takes the request from the external source. Useful for spotting primary interaction points and shared services.
3. **Adjacent application.** A related application one hop away. Click any adjacent application you have access to and you can open its own Service Dependency Map.
4. **Restricted application.** An application your role cannot open.
5. **Inbound traffic indicator.** Marks a service receiving requests or data from an external source.

- 6. Host and component instances.** The total count of host and component instances behind a service.
- 7. Event capsules.** Each service shows a two-part capsule. Left half is workload KPI health, right half is behavior KPI health. Colors:
 - **Green.** No events on the service.
 - **Red.** Events on the service.
 - **Gray.** The service is not being monitored.
- 8. Problems.** Count, IDs, and descriptions of active Severe and Default problems in the selected time range. Click any problem to open it in the Signals tab.
- 9. Early warnings.** Count, IDs, and descriptions of active early warnings. Click any to open it in the Signals tab.
- 10. View Capacity Heat Map.** Open transaction trends to find growth patterns and the workload mixes causing the most anomalies. See Viewing Capacity Heat Map.
- 11. Generate Capacity Forecast.** Build a trend-forecast report from the growth pattern of transactions over the selected period. See Generating Capacity Forecast.
- 12. Maintenance service count.** Number of services currently under maintenance. Services in maintenance show a  icon. Maintenance can be applied to the whole service or to specific instances.
- 13. SDM toolbar.** The Service Dependency Map auto-discovers hosts and services to draw a real-time picture of the application. The toolbar has these controls:
 - Fit the SDM on the page after zooming.
 - Search by service name (full or partial).
 - Save the layout.
- 14. Historical data selection.** Pick a date, time, and time zone to look at past performance.
- 15. Inbound(s).** Transactions hitting the entry-point services.
- 16. Outbound(s).** Transactions leaving the application.

Next

- Service Details Dashboard . per-service drill-down.
- Navigating Signal Tab . problems and early warnings.
- Viewing Capacity Heat Map . workload trends and forecasts.
